Use these suggestions to maintain online payments. Avoid using public-fi wi-fi remain as sure possible on the ITPUBLIC Wi-Fi networks can be convenient, convenient, they can also be dangerous. These free internet access points are common in coffee shops, hotel lobbies, restaurants and even local retailers, and you can hop onto them easily when you donéÁÁÁt want to use up your phone planeÁÁÁs data while youéÁÁÁre out and about. However, public Wi-Fi networks are unsecured, meaning anyone can use them éÁÁÁ including hackers. Hackers can access unsecured devices on unsecured networks, meaning they can intercept information you send out éÁÁÁ like payment details. They can also distribute malware that damages your device.Photo Courtesy: Tony Anderson/DigitalVision/Getty Images ItéÁÁÁs best to wait until youéÁÁÁre at home using your own password-protected Wi-Fi to make your payment. But if you do need to use public Wi-Fi to pay, avoid using an app (like a shopping or banking app) to do so éÁÁÁ itéÁÁÁs harder to be sure that apps are secure. Instead, use your phoneéÁÁÁs internet browser. Before you input your payment information, make sure that the website is fully encrypted. This means it scrambles your data before transmitting it so hackers canéÁÁÁt éÁÁÁreadéÁÁÁ it. YouéÁÁÁll know a website is encrypted when its URL begins with éÁÁÁhttpseÁÁÁ instead of just éÁÁÁhttp.éÁÁÁ The Federal Trade Commission recommends making sure every page you visit is encrypted, not just your payment sign-in page.It may be tempting to use your debit card to make online payments éÁÁÁ the amount is deducted from your bank balance, which helps you stay more current on actual funds you have available. But itéÁÁÁs not the wisest idea to pay with debit. If a hacker gets ahold of that card information, any money they spend using it will come directly out of your bank account. And while youéÁÁÁll have some recourse if this happens and can get that money back eventually if you report it quickly enough, having a chunk of your cash tied up until the matter is resolved can put unnecessary strain on your finances.Photo Courtesy: Natnan gnisusus yb trats.The tuoba refas eb od nac od nac uoy sgniht wed a ereht ,gniog stemyap of detamotua ruoy peek ot of uoy fi .htnom hçae emit no snemap ekam of EFAS is the peek swaw law tawb retteb eht fo fo-o stnuoc snuoc dna sellforp the enilno noitamrofni tnemyap ruotni of ton gnitpo eelw segami ylteg/moisivilatigisig/tepp nitruoc ossery sseye tac teçd teçd and tçed teçd and sserced teçd ,.the niabto sreçkçah dna Hçaerb that devovmi was silt fi. YouéÁÁÁll have access to its fraud-protection features should someone obtain the number. ItéÁÁÁs also helpful to ensure your password is secure and strong. This doesnéÁÁÁt mean you need to change it frequently éÁÁÁ in fact, experts recommend that you donéÁÁÁt change it unless you think itéÁÁÁs been compromised, itéÁÁÁs weak, you shared it with someone or itéÁÁÁll make you feel safer to change it.Use different passwords for each profile or account you have. This way, if someone gains access to one of your accounts and its password, they wonéÁÁÁt be able to access others by attempting to use that same password to get in. If itéÁÁÁs an option, turn on two-factor authentication for your payment accounts as well. This means youéÁÁÁll only be able to access your account after providing two pieces of evidence that verify who you are éÁÁÁ usually your account password and something like a one-time code thatéÁÁÁs emailed to you or sent in a text message.
